OVERVIEW

GENRE: Puzzle game / Platformer

PLAYERS: 1

TARGET: Family

PLATFORM: Nintendo Switch / PC

PEGI: 3+

Dive into a world where gravity changes at every moment, with an agile character switching between a side view and a top-down view. Use your jump, dash, and interaction skills to navigate through levels filled with platforms and puzzles.

LISAA

3C: CAMERA

Main Camera

Third person: side

Mobility on two axes

Lerp-smoothing (smoother transition when switching perspectives)

Position locking (camera locks only onto the character)

Alternative Camera

Third person: top down

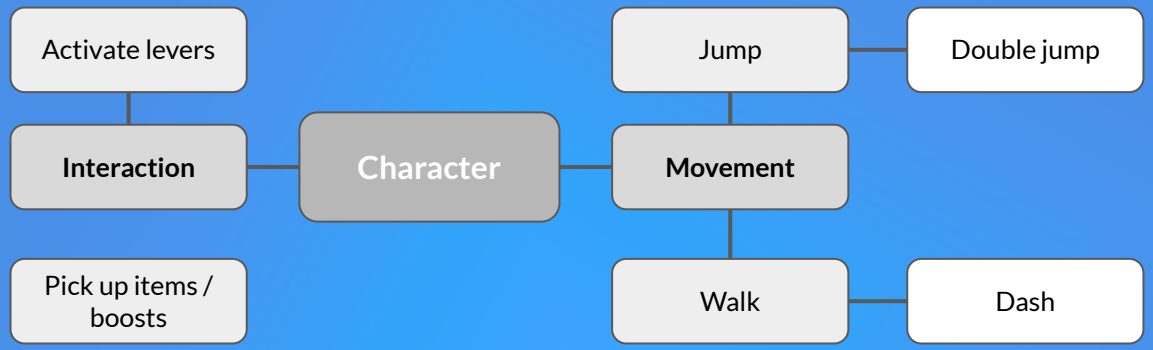
Mobility on two axes

Lerp-smoothing (smoother transition when switching perspectives)

Camera window (focus the camera on the character and their surrounding environment)

LISAA

3C: CHARACTER



- The player can move left and right in side view. They can also move forward and backward in top-down view.
- The player can jump or use their dash.
- The player can switch to top-down view depending on the game situation.
- The player interacts with their environment and triggers various effects.

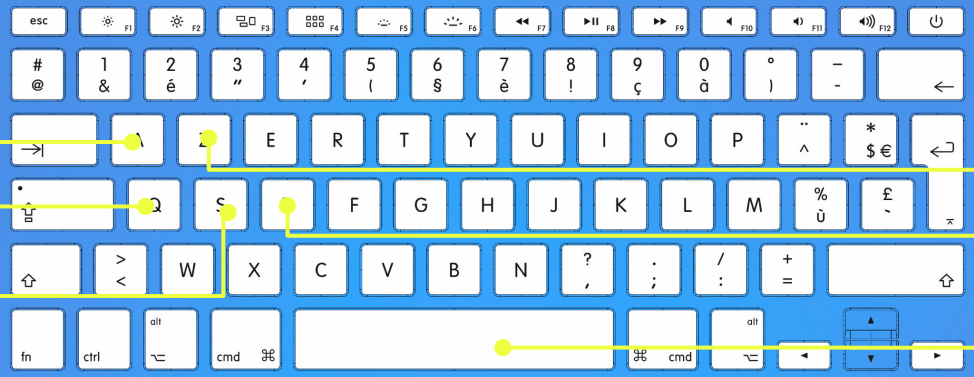
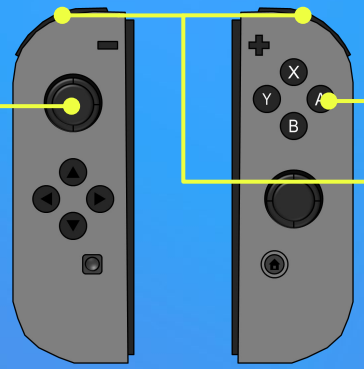
3C CONTROLS

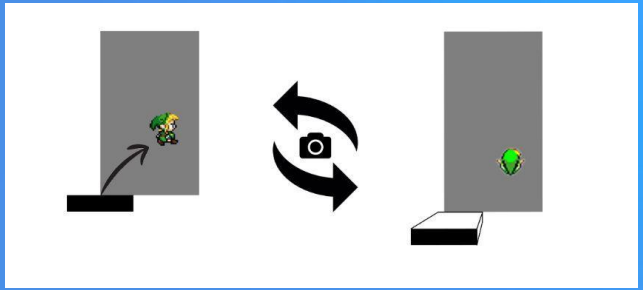


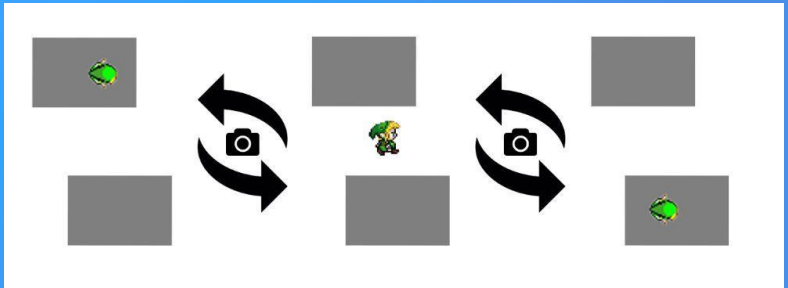


LISAA

MECHANICS: SWITCH

The player starts with the main camera in third person side view. By pressing A they can switch the angle of the camera and switch to Top-Down view, also changing gravity.
The player can thereby reach platforms that were previously inaccessible.
Additionally, this mechanic can be combined with others to take advantage of their effects.



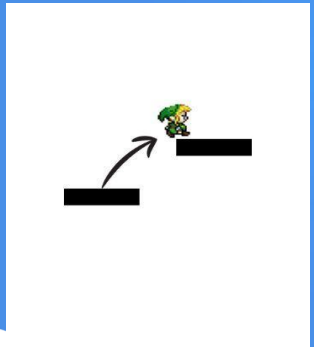


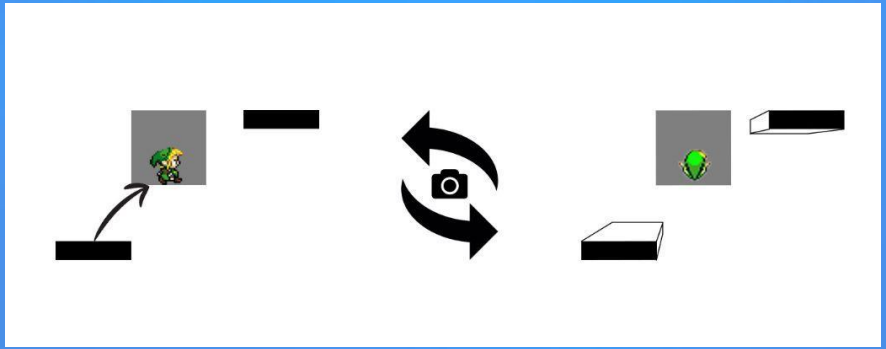
LISAA

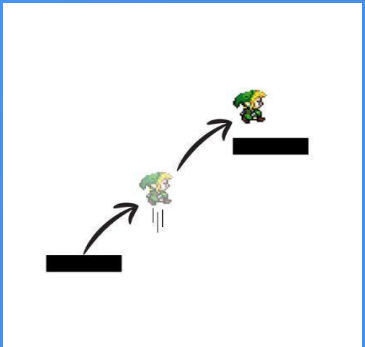
MECHANICS: JUMP & DOUBLE JUMP

During certain levels the player can pick up a pick-up that unlocks a double jump that can only be used on the current level.

The double jump significantly changes how the player approaches the level. Indeed, where the player previously switched perspectives to escape certain situations, they now have the option to use a double jump instead.



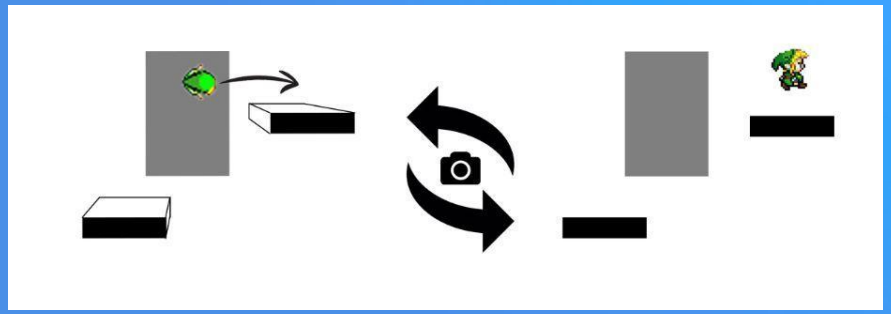


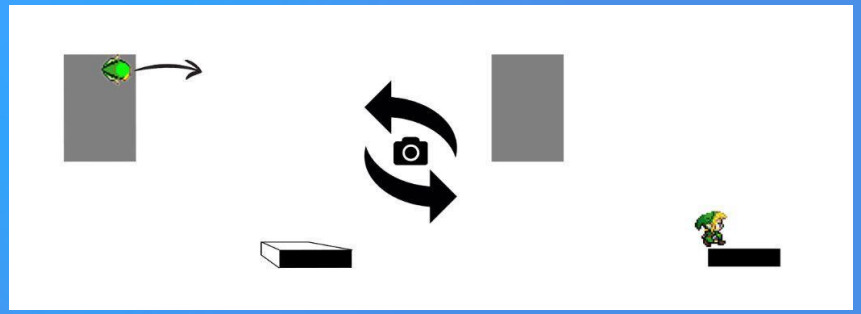


LISAA

MECHANICS: DASH

In top-down view, if the player presses SPACE, they will perform a Dash in the direction of their movement.
When performing this action, the player is propelled forward, and when the player switches the camera back to 2D, they keep the energy from the dash and can reach areas that would normally be inaccessible. The difference between jump and dash lies in the inertia retained, but also in the air control which is limited when dashing.





LISAA

MECHANICS: LEVER

Some levels contain one or more levers. Levers allow you to change the level layout, typically by making some platforms disappear and others appear.
